### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art, in particular the combination of Markle, Galburt and Ioi do not teach the claimed method and apparatus for controlling planar motors including, inter alia, a control scheme using the sum of determined currents and current adjustments to control the motor, wherein the current adjustments (or resultant error) compensate for resultant torques about three axes such that the torques become desired values while the forces about the axes remain the same. Markle does not elaborate details of his servo structure such as a determination of current adjustments. Neither does Markle teach determination of resultant torques of the stage. Neither Galburt nor Ioi remedy Markle since in Galburt a comparison is made between sensed position and computer commanded position and feeding the resultant error back to voice coil actuators; while in Ioi, detected torque and force are balanced with gravitational force of the moving part. Neither Galburt or Ioi specify the steps by which applicant's resultant current adjustments are performed such that the torques become desired values while the forces about the axes remain the same.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
